Subject: Number of residents who have already made connections to PWS

I heard back this a.m. from Kirsten in Dave Conley's office (Downers Grove Public Works, Water Div.) regarding the number of residents (in the affected area) that have signed up for connections to the Public Water Supply since May 2001. That was when the Illinois EPA and Illinois Dept. of Public Health (IDPH) first received sampling results on VOC contamination in private drinking water wells, and that is when IDPH first sent letters notifying residents to pursue an alternative drinking water supply. She said, after consulting with Dave (on vacation) and researching the records, she arrived at a number of 115. That includes residents who in the last two months asked for service but may not be connected yet.

I understand that Rick and Enza may be looking at a different, more detailed number relating to those who signed preannexation agreements. I just wanted to pass that along to the group for future reference. I believe that Kirsten looked at the street addresses in North Belmont Park, Belmont Park and Downers Grove Gardens. This area would likely not include residents who reside in incorporated Downers Grove.
